## Legal

The objective of this Whitepaper is to present the SGV-G Technology<sup>®</sup>, the operation itself, the business that it is proposed to execute based on the collection of **SGV TOKEN** and what is the scalability of the business worldwide. The information set forth below may not be exhaustive and does not imply any element of a contractual relationship. The only purpose of this Whitepaper is to provide relevant and descriptive information to potential token holders so that they can carry out an exhaustive analysis of the crowdfunding project with the intention of acquiring **SGV TOKEN**.

This Whitepaper does not constitute an offer of sale or an offer request to purchase a security in any jurisdiction in which it is illegal to make such offer or request. Neither the Swiss FINMA nor the Securities and Exchange Commission of the United States nor any other foreign regulatory authority has approved an investment in the tokens.

The **SGV TOKEN** can be classified as a value since it gives the right to the token holders to receive the benefits of the business described in the Business Model title of this Whitepaper.

The Token is, as such, subject to certain restrictions under US security laws. UU The ICO environment complies with these rules and restricts access for US citizens, green card holders and US residents. UU To the category of "accredited investors", in accordance with Rule 506 (4) of the US Security Act. UU All relevant legal information is contained in the Token Purchase Terms and the Token Purchase Agreement.

Certain statements, estimates and financial information contained in this document constitute forward-looking statements or information. Such forward-looking statements or information refer to known and unknown risks and uncertainties, which may cause actual events or results to differ materially from the estimates or results implied or expressed in such forward-looking statements.

This Whitepaper in English is the official source of information on the **ICO SGV-G**. The information contained in this document may be translated into other languages from time to time or may be used in the course of written or verbal communications with existing members of the community and potential partners, etc. In the course of a translation or communication such as this, some of the information contained in this document may be lost, corrupted or misrepresented. The accuracy of such alternative communications cannot be guaranteed. In case of conflicts or inconsistencies between such translations and communications, the original provision of this document in English will always prevail.

## Abstract

Global energy is a resource used to exercise all kinds of work on our planet and the human being has used this resource to satisfy the need for the continuous evolution of the human race on Planet Earth. From our ancestors, the human being has had the curiosity to manipulate Energy in its different types of presentation in our environment. Oil has been the resource that has drastically accelerated human evolution where our planet has had to pay the bill for the combustion processes of these fuels.

Nowadays, pollution is a subject that summons humanity completely, that is why human beings have had the need to generate knowledge and research much further on matters of energy efficiency and generation of electricity from renewable processes, or as we know most of us Renewable Energies.

The renewable energies par excellence come from a source of mechanical movement either through hydroelectric, wind or tidal dams. On the other hand we also have energy from solar radiation which gives rise to Solar Energy.

Under this premise, where the human being has placed emphasis on the search for renewable energy under sources present in the environment of the planet, Dr. Wolfgang Weber Hill, German Inventor and President of the German Corporation of Charity and Development CPS in Chile, has investigated for years the behavior of an energetic balance that is present in all the points of our planet. The existence of a gravitational force and atmospheric pressure on our planet creates a balance of pressures where energy is suspended in the physical space of our environment and it is at this point that Dr. Weber has developed the way to create a physical imbalance with the objective of taking advantage of this energy coming from the gravity of our planet.

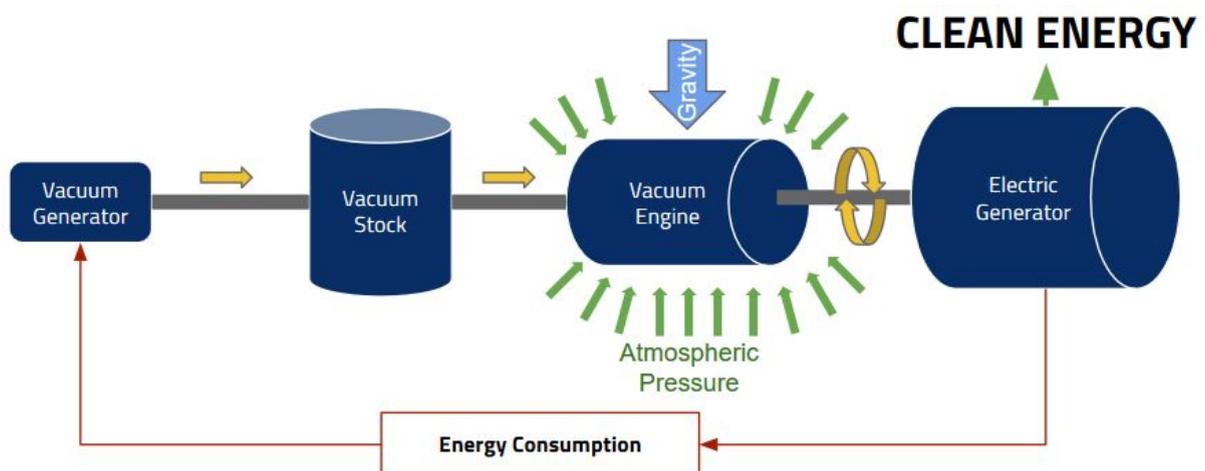

## Problem Solved by SGV-G Technology<sup>®</sup>

The persistent problem on planet earth is obtaining a source of energy capable of delivering an inexhaustible resource with unequaled efficiency values. Sunlight only has the capacity to provide energy for a certain number of hours of the day, the wind energy depends on the weather conditions or the tidal depends on the intermittent waves of the ocean. In short, the demand for energy in the world is increasing and exponential and at present, humanity does not have an inexhaustible source of energy to make possible its drastic growth.

## SGV-G Technology<sup>®</sup>

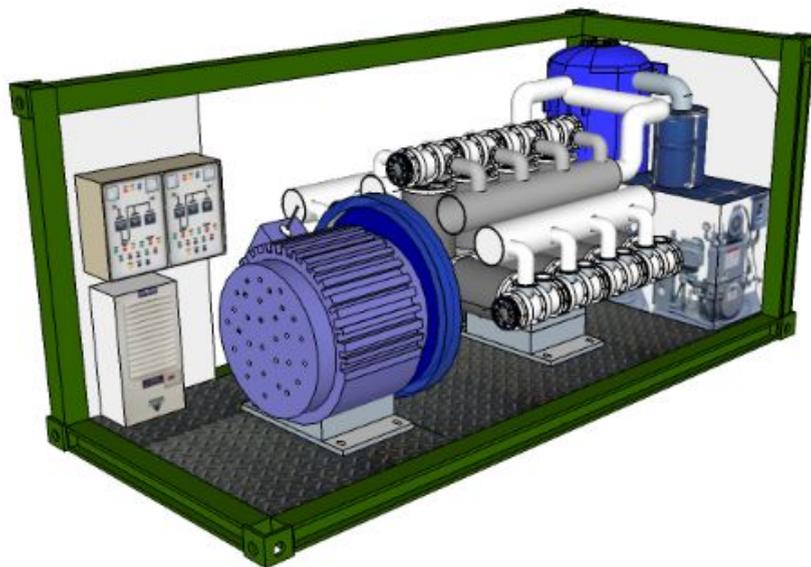

The SGV-G Technology<sup>®</sup> created and developed by Dr. Wolfgang Weber Hill in Chile through the company Gigathor SA, is the Technology that will be responsible for generating clean energy 365 days a year without any interruption, the engineering developments in Chile have been satisfactory, the tests and calculations developed have delivered a final result consisting of a vacuum motor capable of channeling an intermittent vacuum through a piston engine causing an imbalance between the gravity of the planet and the atmospheric pressure present in our environment . SGV-G Technology<sup>®</sup> is copyrighted in all countries of the World and German

## SGV-G Generator Unit

The final result of the SGV-G Technology<sup>®</sup> is the creation of a totally mobile power generation module mounted inside a Container, the size of the mobile unit will depend on the generation capacity of each SGV-G unit.

The SGV-G Technology<sup>®</sup> is probably the best that exists in the renewable energy sector in the world today. The SGV-G Systems work at 24/7 intervals or, in other words, at 8,600 hours per year. They do not use any conventional fuel. SGV-G are driven only by air pressure and gravity. The gap between the two forces is sporadic, but controlled, accumulated and reduced. This makes it possible to combine the two forces of air pressure and gravity, with the result that the vacuum motors can produce a movement that is directly transformed into electrical energy through a conventional PMG magnet generator.

## History

Dr. Wolfgang Weber Hill is a renowned German inventor living in Chile, since his beginnings in the world of inventions has developed many methods of obtaining energy, one of them has been the creation of a device capable of delivering energy through permanent neodymium magnets , technology that has had good results but not similar to the SGV-G Technology®.

The Technological Development product of more than 10 years of research under the company Gigathor S.A. has delivered unexpected results for the last 2 years, a total of 4 prototypes have been built, the last one being the most successful of all.

The last project executed by the company Gigathor S.A. sought to change a combustion engine for a fully functional vacuum-based engine, achieving an incredible result.

From now on the German Corporation of Charity and Development CPS has in its power the calculations and procedures necessary to convert any existing engine based on combustion by a fully functional engine with a vacuum delivered by a vacuum pump. This conversion makes it possible to build a fully functional SGV-G Team.

## Solution

The solution provided by the SGV-G Technology® is to deliver an inexhaustible source of energy to humanity where it will be possible to obtain energy resulting from the creation of instabilities between gravity and the atmospheric pressure of our planet. With the distribution of these equipment on our planet we can return life to the ecosystem by delivering vitality in sectors where they are currently desert or deliver electricity to remote locations.

*The SGV-G Technology® will bring life back to the world and create a clean path of inexhaustible energy production.*

## Contamination

Every year the generation of energy through fossil fuel emanates toxic waste to our atmosphere creating a layer of carbon where the sun's rays are not released to the outside of our planet, this creates a cloud of heat on our environment that starts to a series of environmental problems and catastrophes on our planet. SGV-G Technology® will change the paradigm of electric generation by obtaining energy through the gravity of our planet in conjunction with the continuous atmospheric pressure present in all points of our planet.

## Scalability & Business

These machines, which work constantly and generate electricity where they really need it, have a very large market, in fact, a world market. They do not need a large grid, like other power generators. Therefore, ideal for each location. What does the investor earn by investing in this technology? Very and very versatile.

All the way to the fact that for many years, if not for life, he gets income with his investment.

What's the score? First, the production of a demonstration model in Germany creates the opportunity to sell licenses from large-scale countries. After the sale of the countries' licenses, the dividends are distributed to the investors immediately after receiving the payment.

This means that you can expect a dividend to be paid again at any time, which will generate income on several occasions. Second, it will be necessary to configure the production facilities step by step, because there are already large-scale purchase requests, there is a purchase order from a German / Austrian organization, for about 5000 (five thousand) SGV- G of the class 20-40KW. These and other sales give rise to annual dividends that are paid after the end of the respective annual balance (April of each year). And third, annual dividends also result from the royalty of at least 5% that is included in each sale of a license from a country. This guarantees permanent annual income, since royalty rights must be recognized even if the licenses are resold.

Finally, licenses are very expensive and their payment often extends over 25 years. Therefore, the investor in this ICO consequently also has the right to dividends over the same period of 25 years. With this, everyone can open a source of income, which provides peace and tranquility for many years, if they consider income from royalties, even for life.

## Advantages

The advantages of having an energy generation module capable of being transported in a container anywhere in the world is the energy solution of the moment. This mobile energy module can be used for multiple tasks, even to supply energy to a bitcoin production farm in the remotest part of the planet.

Without energy costs, industries will have a solution to many problems of transmission or geographic location and everything will be even easier to manufacture or possible to sell.

The advantages are endless, the SGV-G Technology® is developed based on field forces that exist throughout the Planet and product of this is an inexhaustible source of energy.

## ICO

The **ICO SGV-G** will consist of a Crowdfunding with a duration of 13 months, starting on February 1, 2018 and ending on March 1 of the year 2019. In this process, the tokens will be put on sale. will give access to participate in the results of the commercial execution of the SGV-G Technology® throughout the world.

The German Corporation of Charity and Development CPS, current owner of the SGV-G Technology®, makes available a permit to use the SGV-G Technology® in exchange for 70% of the total Tokens, making available 30% of income per sale. of Licenses, Production in Germany Factory or Royalty by Production to **SGV TOKEN** carriers.

The ICO will offer an offer of 222.385.185 Million **SGV TOKEN** with variable values depending on each of the stages of Crowdfunding **ICO SGV-G**.

In case of not achieving the total sale goal of Crowdfunding, the surplus **SGV TOKEN** will be burned and will not have an owner.

The future injection of **SGV TOKEN** into this ICO is absolutely forbidden.

## TOTAL 222.385.185 Million **SGV TOKEN**

## Stages

The **ICO SGV-G** will consist of 3 stages, which will include an amount of 13 months, each of the stages will aim to raise the total funds to execute the development of the production project in Germany.

### STAGE 1 - Private Sale

### STAGE 2 - PRE ICO

### STAGE 3 - ICO

#### Stage 1 - Private Sale

The private sale will be executed at the beginning of the **ICO SGV-G** having a duration of 2 weeks with a preferential value of EUR 5 for each **SGV TOKEN**. The private sale aims to raise the necessary funds to carry out the first steps of the **ICO SGV-G** such as the creation of the company in Singapore, creation of the company in Germany and establish offices in Germany. The offer available for this stage is 1,000,000 **SGV TOKEN**, which amount to EUR 5 million.

## Stage 2 - PRE ICO

The PRE ICO will consist of a sale with a preferential price and will last for 3 months. It will begin on March 01, 2018 and the main objective of the collection of this stage will be to finance the expenses for the construction of a model SGV-G accessible to future purchasers of SGV-G equipment and licenses from around the world. Also with these funds we will begin the construction of an automated factory in Germany. The value of each **SGV TOKEN** in this stage will have a value of EUR 7.5 for each **SGV TOKEN**. The offer available for this stage is 5,200,000 **SGV TOKEN**, which amount to EUR 39 million.

## Stage 3 - ICO

The ICO is the final stage in the development of the Crowdfunding and the main objective will be to complete the construction of the automated factory in Germany, which will begin on June 1 of the year 2018 and will end on March 1 of the year 2019. The value of each **SGV TOKEN** at this stage will have a value of EUR 10 for each **SGV TOKEN**. The offer available for this stage is 57,000,000 **SGV TOKEN** which amount to EUR 570 million.

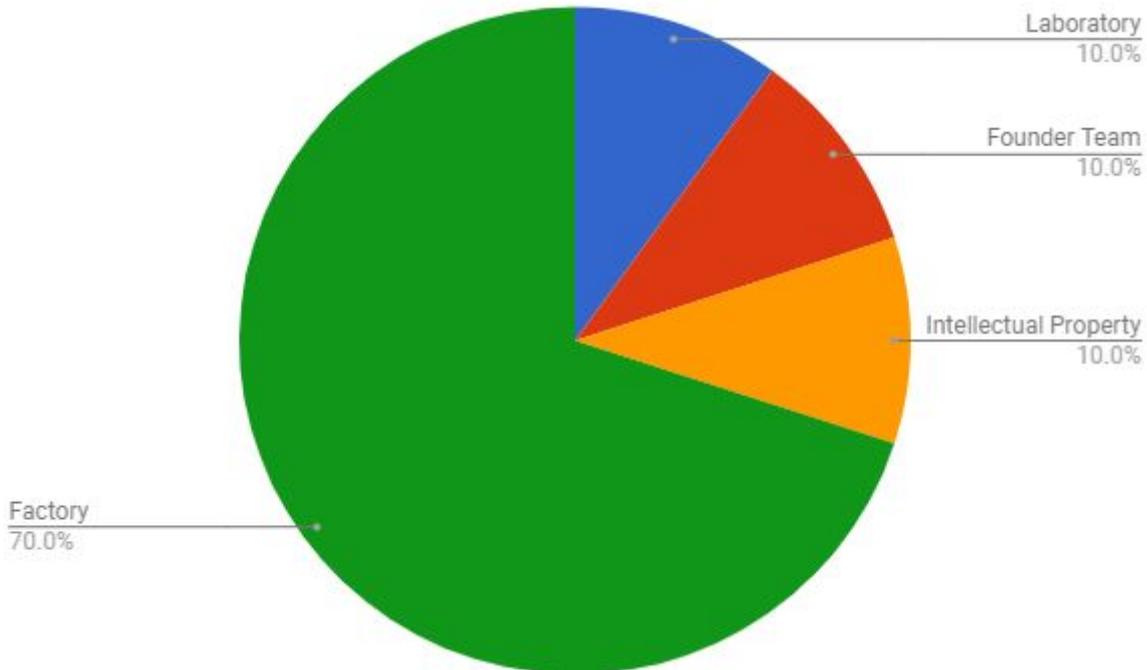

TOTAL FUNDS TO COLLECT  
**EURO 614 MILLION**

## Tokens Distribution

**SGV TOKEN** will be distributed in the following percentages and items assigned by the German Welfare and Development Corporation CPS:

### Factory

70% of the total collected will be to finance the construction of the factory that will execute the production of the existing SGV-G equipment purchase orders and also the future equipment that will be sold from our facilities in Germany.

### Laboratory

The 10% of the total collected will be to finance the construction of a Laboratory for the SGV-G Technology® in Germany, in this Laboratory the fatigue and durability tests of the materials will be carried out with which the future equipment designed by the German Corporation of Beneficence and Development CPS.

## Founder Team

10% of the total collected under the Founder Team concept will be used to pay the maintenance costs of our founding team corresponding to fees and production of conventions that will take place all over the world.

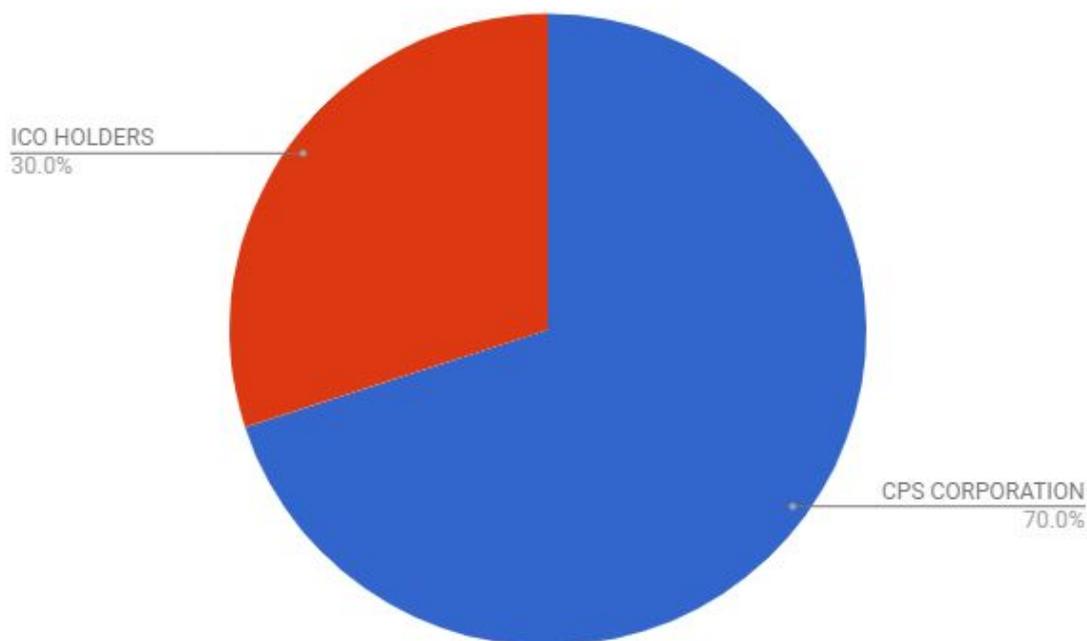

## Intellectual Property

10% of the total collected under the Intellectual Property concept will be destined to pay the costs of maintenance of Copyrights and various costs of legal defense of our SGV-G Technology® in all the Countries of the Globe.

## Germany Factory Sales Distribution

The profits obtained under the commercial exercise of the SGV-G Technology can be in any of the 3 numbered forms below, its distribution will be as described in the graph below:

1. Equipment Production Results in Germany Factory
2. Sales of Equipment Production Licenses SGV-G
3. Income for Royalty product execution of Production Licenses SGV-G

## Business Model

The German Corporation of Charity and Development CPS Chaired by Dr. Wolfgang Weber Hill, has decided to capitalize on the development and global production of their equipment through an ICO called **ICO SGV-G**. The **ICO SGV-G** will result in the creation of a commercial base in Singapore and a SGV-G equipment factory in Germany.

## Incomes by Production

The German Corporation of Charity and Development CPS reserves the responsibility for the SGV-G Technology<sup>®</sup> by giving the **ICO SGV-G** the permission to use the SGV-G Technology<sup>®</sup> to carry out the production in Germany and process the following orders:

- 7000 SGV-G equipment for a German company
- 2000 SGV-G equipment for a Chilean company

These orders listed above are purchase orders that currently the German Corporation of Charity and Development CPS has in production queue and will be executed by the manufacturing company A.G. which will be founded in the coming months in Germany.

## Incomes by Licenses

SGV-G Technology production licenses are currently available for all countries in the world, and the German Welfare and Development Corporation (CPS) is responsible for marketing these production licenses.

## Incomes by Royalty

The German Corporation of Charity and Development CPS will receive a royalty generated by the sale of each of the equipment produced worldwide product of the sale of production licenses, 30% of the royalty paid to the German Corporation will be distributed proportionally to the amount of **SGV TOKEN** obtained in the sale of the ICO.

## Delivery Profits

The **SGV TOKEN** delivery will be executed through an Exchange Platform selected at the end of the ICO. Through a platform that will be made available on our website, the KYC process will be carried out, which will give access to the **SGV TOKEN** carriers to withdraw the profits that will be distributed in BTC currency to the electronic wallet created by each one of **SGV TOKEN** carriers.

The detail of the earnings deliveries are detailed below:

- The delivery of the profits obtained by the production of equipment SGV-G in Germany will correspond to 30% of the income received by the manufacturing process of 9,000 SGV-G Units in production queue plus the future Units that will be sold to companies buying equipment in Germany , this will be distributed to the **SGV TOKEN** carriers in proportion to the contributions given in the development of the **ICO SGV-G**.
- The profits obtained from sales of Licenses executed by the German Corporation of Charity and Development CPS will be delivered at the time of the payment and will be distributed 30% of the income to the **SGV TOKEN** carriers in proportion to the contributions delivered in the development of the **ICO SGV-G**.
- The payment of the Royalty for production will be delivered at the end of each commercial year where the German Corporation of Charity and Development CPS reserves the exact date of delivery of said Royalty.

## Type of Payment Accepted

Payment methods of **SGV TOKEN** will be in Bitcoin, Ethereum and FIAT. Payment in FIAT currency will be made only after the person has successfully completed the KYC process in our payment gateway.
